EXPORTS...

*... their importance to
the United States economy*

Exports play an important role in our economy and in the increasingly interdependent world economy. The United States is the world's largest exporter—currently selling \$200 billion of U.S. goods abroad—and is the world's largest economy. With 5 percent of the world's population, our country produces 24 percent of the world's industrial goods.

Exporting provides a broader marketing base for U.S. firms and is considerably more important than many Americans realize. Exports currently account for 5 million jobs in the United States. On average, 25,000 jobs are generated per \$1 billion of U.S. merchandise exports.

Many jobs depend on exports

Employment generated by exports is much greater than the number actually employed in producing the final products shipped abroad. Exports create a large demand for employment that spreads throughout our economy. This includes all the jobs needed to produce goods and services supplied to export producers, the jobs needed by the export producers to produce exports, and the jobs needed to move products to our ports or borders for transport to other countries.

Most of the export-related jobs are in manufacturing and services. According to the latest estimates, 49 percent of the jobs are in manufacturing, 37 percent in services, and 14 percent in production of nonmanufactured goods. The importance of export employment varies among the industries. About one out of every eight Americans currently employed in manufacturing is dependent on exports of manufactured goods. About one out of every six jobs producing nonmanufactured goods and one out of 24 jobs in services are export-related.

Exports affect production and employment in all industries, not just in a few major export industries. For example, while the primary metals industries directly export about \$6 billion of their products annually, an additional \$21 billion of steel and other metals are exported in the form of American-made computers, aircraft, tractors, and other manufactured goods.

Exports are of great importance to America's farmers as well. They account for \$1 of every \$4 of farm sales. Likewise, many jobs in the coal mining and mineral industries, as well as a considerable number in the fishing industry, are dependent on overseas

sales. Exports also support employment in the trucking, rail transport, insurance, and other service industries.

Exports essential

But the basic importance of exports is that they are the principal means by which America pays for its purchases from foreign countries. The United States imports proportionately far less than other major countries, but imports have become increasingly important to the American standard of living—and they have to be paid for. The other major industrial nations generally cover the cost of the goods they import by their exports. Merchandise exports and imports each account for an average of about 20 percent of the gross national product in that group of countries. American exports, however, were only 5.9 percent of GNP in 1983, while the ratio of imports to GNP stood at 7.8 percent. This gap between exports and imports is the trade deficit, which amounted to \$57.6 billion in 1983.

The strength of our exports means a great deal to America. Exports are important to all the 50 states, and each state plays a significant role in meeting the need to export more. This report helps explain that role and shows the significance of exports in relation to employment and production.

Alabama Export Highlights

Alabama's exports of manufactured goods totaled \$1.9 billion in 1981, more than double the 1977 value. They rose more than two times as fast as production in the state.

An estimated 19,000 jobs in Alabama were directly related to producing manufactured exports. An additional 19,100 jobs were required to produce materials and parts for incorporation in other products exported from the 50 states. Thus about 38,100 jobs in Alabama were dependent on exports of manufactured goods—about one of every nine manufacturing jobs in the state.

Manufactured exports doubled

Alabama's exports of manufactures reached \$1.9 billion in 1981, 116 percent above the 1977 level. The state ranked 24th among the 50 states as an exporter of those goods, and its exports accounted for 1 percent of the nation's exports of manufactures. Export growth outpaced the 45 percent increase in Alabama's production of manufactures from 1977 to 1981.

Chemicals, electric and electronic equipment, and food products were the most important manufactured exports from Alabama. From these three industries alone sales to foreign countries were valued at \$959 million, about half of the state's total exports. In addition, a wide variety of goods valued in the \$100 million range were shipped overseas, including nonelectric machinery, primary metals, paper, and fabricated metals.

Exports of chemicals were valued at \$417 million in 1981. The 88 percent growth in chemical shipments since 1977 represented a strong advance. Because exports grew faster than production, the export share was 19 percent. These exports required an estimated 1,900 jobs, 13 percent of the workers employed in this Alabama industry.

Electric and electronic equipment exports of \$294 million were more than 3.5 times the 1977 level. Exports were 22 percent of the state's production in 1981 and provided employment for 3,600 workers.

Exports of manufactured food products in 1981 were up 77 percent from that in 1977. The state ranked 14th nationally in exports of these products.

The Census Bureau has estimated that the full

impact of U.S. exports on Alabama's manufacturing activity was 13.1 percent rather than the 6.3 percent attributable to direct exports as shown in table 3. Estimates including supporting shipments of materials and parts for incorporation in products exported from 50 states are shown in tables 6 to 8. Thus, of the expanded manufacturing output generated between 1977 and 1981, 21 percent—or \$1 out of every \$5—was due to export-related shipments.

Soybeans leading agricultural export

Alabama's share of U.S. agricultural exports in FY 1982, including some manufactures of farm origin, totaled an estimated \$481 million, up 45 percent from the FY 1977 value. Soybean sales grew to \$196 million, more than triple those of cotton, which traditionally had been the leading export crop. The state ranked second after Georgia in peanut shipments valued at \$37 million. Its \$48 million of poultry sales made the state the fourth largest exporter nationally. Other increased exports included wheat and flour.

The sharp growth in exports of agricultural products from FY 1977 to FY 1982 accounted for 21 percent of the rise in farm sales, and added substantially to the income of Alabama farmers. The export contribution to each dollar of the state's cash receipts from farm marketings was 22 cents.

Exported coal

Coal accounted for most of Alabama's mineral exports. Shipments were valued at \$347 million in

(continued on back cover)

Explanatory Notes

State export statistics presented in this report are estimates, in contrast to national export statistics, which are compiled from export documents prepared at the time goods leave the country. This note considers the reasons for, and consequences of, that difference.

Export estimates for each state are needed in order to measure the relative impact throughout our nation of changes in goods sold abroad. National export data are compiled each month in detail by types of goods sold and summarized in large commodity aggregates and overall totals—but in order to measure exports by each state of origin, which is not identified in shippers' export documents, special studies are necessary.

This report—one in a series of reports for each state—brings together state export estimates from studies by various U.S. Government agencies on manufactured goods, agricultural products, fishery products, and selected minerals. Overall totals for all goods exported from each state are not shown since these studies differ in methodology, frequency, export valuation, and U.S. geographic coverage, and the manufactures and agricultural studies somewhat overlap the products covered.

Manufactured Exports in this report relate to manufactures as defined in the Standard Industrial Classification (SIC) and include manufactured food, mineral fuel products, fats, oils, firearms, and ammunition not typically part of the Standard International Trade Classification (SITC) definition of manufactures. For the United States as a whole, exports of these additional products totaled \$28.5 billion in 1981. Exports, normally valued at the port of exportation, are adjusted to f.o.b. plant values to make accurate comparisons with production (shipments) data.

The state estimates for manufactured goods are based on surveys of manufacturers conducted by the Industry Division of the Bureau of the Census. These studies are for selected years; cover the continental United States, Alaska, and Hawaii; and present data classified by the 20 major SIC industry groups (2-digit). Tables 1 to 3 show

the value of state exports and state production, and the number of workers employed in manufacturing plants producing the finished goods for direct shipment to foreign destinations.

State economies also benefit from manufactured goods produced for ultimate export through other states, and from jobs related to manufactured exports which are generated in nonmanufacturing industries. In the table below, percentages show the full impact of export-related manufactures on state employment. Tables 6 to 8 show the percent of production and the value of state export-related manufactures—direct exports plus indirect exports or the value of materials and parts incorporated in products exported from elsewhere in the nation—and the number of state export-related workers employed in manufacturing plants producing these goods. Table 8 also shows the total number of workers related to manufactured exports—in manufacturing plus the number in nonmanufacturing industries supporting manufactured exports by supplying materials or services such as forwarding, warehousing, transport, and other foreign trade-related services.

Agricultural Exports relate to food products other than those from marine sources, unmanufactured tobacco, and other agricultural products simply processed such as fibers, raw hides and skins, fats and oils, wine and beverages other than distilled types.

The state estimates for agricultural exports are from studies prepared by the U.S. Department of Agriculture. Exports reflect shares in national exports according to each state's production and sales data. Export values were obtained by multiplying each state's share of farm production by commodity times the total export value for each of the respective commodities. These annual studies are for fiscal years ending September 30 and for all states except Alaska, and show data classified by 18 commodity groups. Tables 4 and 5 show the value of state exports and the percent of farm sales.

Other Exports—Fishery products, various minerals, and fuel export estimates shown in the Highlights on page 1 for selected states are from studies prepared by the National Oceanic and Atmospheric Administration (NOAA), the U.S. Department of Interior, and the U.S. Department of Energy, respectively. Exports generally reflect shares in national exports according to state production.

Annual Exports and Employment Related to Manufactured Exports

	Manufactured exports	Manufacturing employment		Total employment, including nonmanufacturing employment	
	(million dollars)	(thousands)	Percent of manufacturing employment	(thousands)	Percent of civilian employment
Alabama *					
1976	832	30.1	9.1	48.9	3.6
1977	895	26.8	7.8	45.3	3.3
1980	1,674	36.4	10.4	68.7	4.5
1981	1,936	38.1	11.0	71.7	4.6
United States					
1976	83,098	2,125.4	11.3	3,452.1	4.0
1977	85,796	1,990.2	10.2	3,258.2	3.6
1980	151,216	2,639.3	12.8	4,808.3	4.8
1981	164,283	2,603.8	12.8	4,794.0	4.7

* Alabama's export-related manufactures were as follows in million dollars: 1976, 1,966; 1977, 2,061; 1980, 3,595; and 1981, 4,024. About 21 percent of the increase in Alabama's manufacturing production from 1977 to 1981 was generated by growth in export-related manufactures.

TABLE 1

Alabama Manufactured Exports, Production, and Employment, 1981

- Alabama's leading manufactured exports were chemicals, electric /electronic equipment, and food products.
- These three industries accounted for 49 percent of Alabama's total exports of manufactures.

Industry group	Production (million dollars)	Estimated exports	Exports as percent of production	Estimated employment related to exports (thousands)	Employment related to exports as percent of total employment
Total ¹	30,509	1,936	6.3	19.0	5.5

* Exports reflect shares in national exports according to each state's production. ¹ Commercial sales plus net Commodity Credit Corporation loans and purchases under price support programs. ² Includes exports that were not apportioned among states. ³ Less than \$500,000. ⁴ Not available. ⁵ Less than \$100,000. -- Not applicable.

TABLE 6

Alabama Manufactured Production, Export-Related Manufactures and Employment, 1981

- About 1 out of 9 Alabama jobs in manufacturing are due to exports.
- Four industries—primary metals, electric/electronic equipment, chemicals, and textile products—accounted for 44 percent of Alabamas's export-related jobs in manufacturing.

Industry group	Production (million dollars)	Export-related manufactures	Export related as percent of production	Employment for export- related manufactures (thousands)	Employment for export related as percent of total employment
Total¹	30,509	4,024	13.1	38.1	11.0
Primary metal industries	4,575	841	18.3	5.5	16.8
Chemicals and allied products	3,086	773	25.0	3.5	24.6
Paper and allied products	3,216	360	11.1	2.0	11.1
Electric and electronic equipment	1,355	342	25.2	4.3	22.1

Leather and leather products	(¹)	(¹)	--	(¹)	--

¹ Total includes estimated production and export-related values, and employment numbers which are withheld for certain industry groups to avoid disclosure of individual companies' data. -- Not applicable.

TABLE 7

Alabama Growth in Export-Related Manufactures

- The 95 percent growth in the value of export-related manufactures from 1977 to 1981 was much faster than the rate of expansion in production.
- Nearly one-third of the increase in primary metals production, and two-fifths of the rise in chemicals output was generated by growth in export-related manufactures.

Industry group	Export-related manufactures (million dollars)		Percent increase from 1977 to 1981		Export-related increase as percent of production increase 1977-81
	1977	1981	Export related	Pro- duction	
Total¹	2,061	4,024	95	45	21
Primary metal industries	557	841	51	25	31
Chemicals and allied products	384	773	101	51	38
Paper and allied products	139	360	160	62	18

¹ Totals include values for industry groups which are not shown separately. ² Not available. ³ 1976. -- Not applicable.

TABLE 8

United States Export-Related Manufactures and Employment by State

- California, New York, Texas, Pennsylvania, and Ohio led the states with the largest number of jobs related to manufactured exports.
- Employment rates were highest in Connecticut, Washington, Ohio, and Delaware for jobs in all industries related to manufactured exports.

State	Rank as export related in 1981	Export-related manufactures				Employment for export related as percent of manufacturing employment	Total employment related to manufactured exports	
		1977 (million dollars)	1981	Percent increase from 1977 to 1981	Percent of state production 1981		(thousands)	Percent of civilian employment
U.S., total	--	142,404	271,703	91	13.4	12.8	4,794.0	4.7
California	1	13,319	27,399	106	14.2	14.5	526.5	4.7

Exports of U.S. Manufacturing Industries Related to Domestic Production, 1981

Direct Exports and Indirect Requirements to Support Exports

Note: Percentages shown for each industry indicate the total relative impact of exports on the domestic economy, including direct exports and goods shipped from domestic establishments for use as inputs in manufactured products exported from other establishments. Such inputs are included in domestic production industry totals.

continued from page 1

1981. Small amounts of iron and steel scrap, ferro-silicon and clay were also shipped abroad in 1981.

Exported fishery products

Alabama's exports of fishery products totaled \$5.7 million in 1981 compared with estimated sales of \$6.3 million in 1977. The state placed fourth nationally as an exporter of fresh and frozen shrimp, with shipments abroad amounting to \$4.4 million. About \$1 million of other fresh and frozen fishery products also were exported. Small amounts of shells continued to be shipped abroad.

Export employment grows

Alabama's \$1.9 billion worth of manufactured exports provided direct employment for an estimated 19,000 workers in 1981. Those jobs constituted 5.5 percent of the total manufacturing employment in the state. From 1977 to 1981 the number of workers engaged in the production of manufactures rose by only one percent, while employment directly related to exports increased 74 percent. Half of these jobs were in four major industries—electric/electronic equipment, food products, nonelectric machinery, and chemicals—each accounting for 2,000 or more workers. These jobs contributed 8 to 19 percent of the work force in those industries.

In addition, an estimated 19,100 jobs were required in the state to manufacture products used by other establishments in the United States as inputs for manufactures that were ultimately exported. Thus, an estimated 38,100 jobs in Alabama were directly or indirectly dependent on exports of manufactured goods. These jobs accounted for 11.0 percent of all manufacturing employment in the state.

Over two-fifths of the jobs dependent on manufactured exports were concentrated in the primary metals, electric and electronic equipment, chemicals, and textile mill products industries. These jobs accounted for one out of two jobs in the chemicals industry, one out of five jobs in the electric/electronic equipment industry, and one out of six/ten jobs in the primary metals and textile products industries.

An additional 33,000 jobs were generated in non-manufacturing industries that supply materials and services supporting manufactured exports. Alabama's total employment related to manufactured exports amounted to 71,100 jobs.

It is estimated that Alabama's farm employment related to exports in 1982 amounted to about one out of every five farmers. This estimate assumes that the number of farmers dependent on exports corresponds to the ratio of exports to farm sales in the state. Depending on numerous variables, including the character of the product, mechanization, and degree of intensiveness of farming, it may somewhat understate or overstate the actual number dependent on exports.

STATE EXPORT REPORTS

This report is one of a series of 50 prepared by the Office of Trade and Industry Information/Trade Information and Analysis, International Trade Administration on exports from the individual states. Data on manufactured and agricultural exports are presented in tabular form for a series of years. In addition, recent information is included on state exports of fish, fish products, and minerals. The statistics on 1981 exports of manufactures by state were taken from *Origin of Exports of Manufactured Products, 1981 Annual Survey of Manufactures*, M81 (AS)-5, issued by the Bureau of the Census in May 1983. That publication can be ordered from the Data User Services Division, Customer

Services (Publications), Bureau of the Census, Washington, D.C. 20233, or from any U.S. Department of Commerce District Office for \$2.75 per copy. Data for earlier years were taken from similar Census reports now out of print.

The information on state shares of agricultural exports was taken from various issues of *Foreign Agricultural Trade of the United States* published by the U.S. Department of Agriculture. Special compilations on exports of minerals and fuels by state were provided by the Bureau of the Mines, U.S. Department of Interior, and by the Energy Information Administration, U.S. Department of Energy, and on fish and fishery products by National Oceanic and Atmospheric Administration, U.S. Department of Commerce.
